

Questions, metrics and evidence

I'm looking for Data Analyst / BI opportunities focused on reporting and data quality.

Start with NBA Analytics: my main English-language case study, with Python ETL, SQL Server and Power BI.

Start with NBA

01

Preserve valid history

65,642 unique games; historical references and duplicate keys handled separately.

02

Define comparisons

The same wins / games definition, with explicit historical and 2013-2022 windows.

03

Make results reviewable

Six report pages, a native PDF, SQL checks and documented reproduction steps.

Complementary evidence

01

Financial Power BI

Financial KPIs and 68 SQL/DAX contexts. Spanish report; English technical documentation.

02

Miami ETL

A commercial signal tested for robustness, plus a reproducible demo. Main experience: Spanish.

03

Gestion Financiera

Operational metrics, aging and cohorts reconciled on fictitious demo data. Main experience: Spanish.
